May 14, 2020

Please join us for a second public meeting scheduled for **4:30 p.m.** on **Wednesday, May 27, 2020** to discuss the evaluation and preliminary design of the stormwater pump station located at the end of Ocean Avenue West. Under the current stay-at-home advisory, this meeting will be held via Zoom and recorded for later viewing. Those interested in attending the virtual meeting, please visit zoom.us/join after **4:30 p.m** and use **Meeting ID 822 7556 2850** and **Password 649138** to join. You may also join by placing a toll-free call to either **877-853-5257** or **888-475-4499** and entering the Meeting ID when prompted.

This project is a continuation of the 2007 South River Drainage Improvement Projects Planning Study, which addresses the low-lying areas of Jefferson Avenue, Canal Street, and Geneva Street. Funding has been secured for 2020 through the Municipal Vulnerability Preparedness Fund. The goal of the project is to provide storm drain upgrades and resiliency measures to mitigate flooding.

During this meeting, the project team will provide an update on activities taken thus far and offer time for feedback or questions related to the stormwater pump station project.

Your attendance and participation is appreciated in making this project a success. If you have any questions about attending the virtual meeting, how to view it later, or about the project itself, please call me at 978-619-5673.

Sincerely,

David H. Knowlton, PE
City Engineer/DPS Director
